

FOUR & SIX GOBO TRAYS

SX4[®] GOBO AND COLOR CHANGER

SX4[®] Gobo Trays
 US Patent # 6,926,427
 August 9, 2005

The GAM SX4[®] Gobo and Color Changer System offers a choice of two trays that snap into an ETC Source Four as pictured above. It can be fully DMX controlled and also has built-in programs for automatic pattern changes where a light board may not be available - ideal for display applications. Using the built-in programs you can select speed, direction, and lapsed time of pattern changes, and it will automatically sequence when power is turned on. The Gobo Trays use the same power supply as the GAM Indexing TwinSpin[™] and are compatible with some popular power supplies. An excellent choice for display, retail, theatrical or special event applications. You can choose from over 800 off-the-shelf patterns. The Four-Gobo Changer uses any 'B' size pattern and the Six-Gobo Changer, any 'M' size.

TS6240 - B SIZE

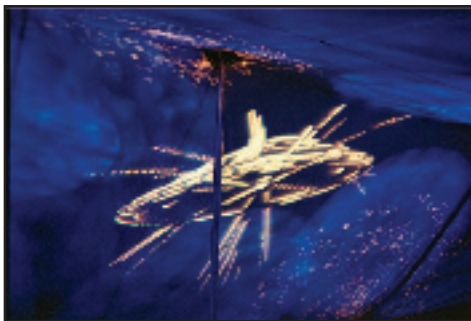

TS6220 - M SIZE
